PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 5+ years of experience building scalable, reliable and user-focused web applications, combining strong backend expertise in PHP and Laravel with modern frontend development in React.js and Vue.js. Currently developing two production SaaS platforms live in Qatar: Sportra, a sports booking marketplace, and Evencia, an enterprise event management platform used for major events in Qatar and internationally.

- **Backend & APIs:** Database design, RESTful APIs for web and mobile, authentication and authorization, complex business logic
- **Payments:** Payment gateway integration, subscription, ledger and payout systems
- **DevOps:** Git workflows, CI/CD with GitHub Actions, server and environment setup (dev, staging, production)
- **Documentation:** Technical writing, user guides and help centers, AI-powered documentation search

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer

May 2025 – Present

United Systema

Sportra – Sports booking & coaching marketplace, live in Qatar (sportrigo.com)

- Develop the Laravel 12 backend of a three-sided marketplace connecting customers, coaches and venues, with a React (MUI) admin panel and REST APIs consumed by the Flutter mobile app.
- Built booking workflows for single sessions and series packages, subscription plans with free trials and tiered access, promo codes with analytics, reviews and ratings, and push notifications.
- Integrated the SkipCash payment gateway (QAR) and built a financial ledger with bi-weekly provider payouts, deferred payouts and balance reconciliation; hardened the payout pipeline by fixing 8 bug areas, validated by 92 passing automated tests.
- Implemented authentication and authorization with Laravel Sanctum and Spatie roles/permissions, reCAPTCHA v3, guest browsing without registration, and encryption of banking (IBAN) data.
- Built a content moderation system (user reports, blocking, SLA enforcement, admin audit views) and resolved compliance issues to get the mobile app approved on the Apple App Store.
- Built and optimized GitHub Actions CI/CD pipelines for development and production (dependency caching, concurrency controls, faster SSH deployments); set up the staging environment on DirectAdmin with a separate database, Cloudflare DNS and Let's Encrypt SSL.
- Wrote and published the Sportra Help Center (Docusaurus), documenting customer, coach, venue and admin roles, bookings, payments, payouts and subscriptions.

Evencia – Enterprise event management platform used for large-scale exhibitions, conferences and galas in Qatar and internationally (evencia.io)

- Develop and maintain features across the full event lifecycle: event setup, guest registration with custom forms per guest group, ticketing, and personalized badge and certificate generation.
- Build on-site operations features: venue and gate management, QR code scanning for fast check-in and access control, and workshop registration with capacity tracking.
- Develop guest services modules: travel management (flight and hotel bookings), concierge services, and multi-channel communication through automated email campaigns, WhatsApp and SMS.
- Contribute to engagement and reporting tools: surveys, real-time chat and file sharing, user management, and dashboards with live registration, attendance and payment statistics.
- Built the Evencia documentation site (evencia.io/docs) with Next.js and Fumadocs, migrating it from Docusaurus, with user guides for every platform module.
- Developed an "Ask AI" assistant for the documentation: a PHP backend that retrieves relevant content from a docs index and streams answers from an LLM via OpenRouter.

Backend Laravel Developer

Feb 2024 – Mar 2025

SW Consulting

- Developed a CRM application with PHP and Laravel covering customer management, workflow automation and role-based access control.
- Implemented email and WhatsApp notifications, data import/export, PDF generation and reporting.
- Integrated third-party APIs and optimized database queries and schema for performance and scalability.
- Used Git for version control and deployed application releases to the server.

Freelance Full-Stack Developer

Jan 2021 – Dec 2023

Self-employed

- Designed and developed custom websites, e-commerce platforms and business showcase sites using PHP, Laravel and Angular.
- Implemented secure online payment integrations for e-commerce clients.
- Managed the full project lifecycle: requirements, UI/UX design, development, server deployment and maintenance.

Web & Mobile Developer

Feb 2020 – Dec 2020

Confledis – Paris, France

- Developed a web and mobile carpooling application from design to deployment using Ionic, Angular, Laravel and MySQL.
- Integrated maps, ride price calculation, online payments and ticketing features.
- Worked in an Agile/Scrum team, managing tasks and sprints in Jira.

TECHNICAL SKILLS

- **Programming Languages:** PHP, JavaScript, SQL, Python
- **Backend:** Laravel 12, Eloquent ORM, RESTful APIs, Laravel Sanctum, Spatie Permissions, Role-Based Access Control, MVC
- **Frontend:** React.js, Material UI (MUI), Vue.js, Angular, Next.js, Ionic, HTML5, CSS3, Bootstrap
- **Databases:** MySQL, Database Design, Query Optimization, Migrations, Transactions & Concurrency Control
- **Version Control & CI/CD:** Git, GitHub, GitHub Actions, Branching Strategies, Pull Requests, Code Review
- **Deployment & Servers:** Linux Servers, SSH, DirectAdmin, Cloudflare DNS, SSL (Let's Encrypt), Dev/Staging/Production Environments
- **Integrations:** SkipCash Payment Gateway, Payment & Payout Systems, reCAPTCHA v3, Push/Email/WhatsApp Notifications, OpenRouter (LLM)
- **Documentation:** Technical Writing, User Guides, Docusaurus, Fumadocs
- **Tools & Methods:** Visual Studio Code, Jira, Automated Testing, Agile/Scrum, Full Software Development Lifecycle

EDUCATION

National Engineering Diploma in Computer Engineering

2016 – 2021

ESPRIT – Private Higher School of Engineering and Technology, Tunisia

- Includes National Diploma in Preparatory Cycle in Physics and Chemistry.

TRAINING & CERTIFICATIONS

Artificial Intelligence & Machine Learning (Self-directed Training)

2022 – 2023

- Completed 31 OpenClassrooms courses: Python, data analysis, statistics, machine learning (Regression, SVM, KNN, Decision Trees) and deep learning (ANN, CNN, RNN, LSTM, GAN, Transformers).
- Completed Kaggle courses and competitions, applying predictive modeling to real datasets.
